K/A Dear sir / Madam

ABOUT US : Bhavya Tech International is a Concern Started in 2014, which is exclusively dealing in Lift Hydraulic/ Goods hyd home lift/Car lift/Traction Passenger/ Goods & all material handling equipment's and have established a name in the market for the quality of products and excellent after-sale service.

The company do not depend on batch testing but take trials and tests of each and every unit on a safe working load as well as overload. As result, there is hardly any complaint from the users.

We have given a small introduction.

Bhavya Tech International, specializes in the modernization , Sale and maintenance of all types lifts ,Traction, Machine Room Less (MRL), Hydraulic, Counter wait lifts, rack pinion drive lifts ,Stair chair lift, Hydraulic wall Mounted Stacker (Goods/Passenger), Electronic wire Rope , Chain hoists , Hydraulic Stacker ,pallet Truck , Hand trolley ,Drum, Roll, warp beam pallet & box Handling Equipment and use for construction Machinery .

Bhavya Tech International offers the customer unparalleled levels of Sales & service quality and excellence. We are a progressive company reflecting the future of the Lift, MHE, Rack, Construction equipment's service & maintenance.

The main activity is the Sale & Service installation, maintenance, and modernization of elevators, car parking systems Material Handling , BMU, Storage and construction equipment.

Our extensive inventory of new and used different categories of lifts can fulfil any customer requirement. Industrial batteries and chargers are available both new and used for all types of equipment. Our experienced people are able to help you design all kinds of requirements.

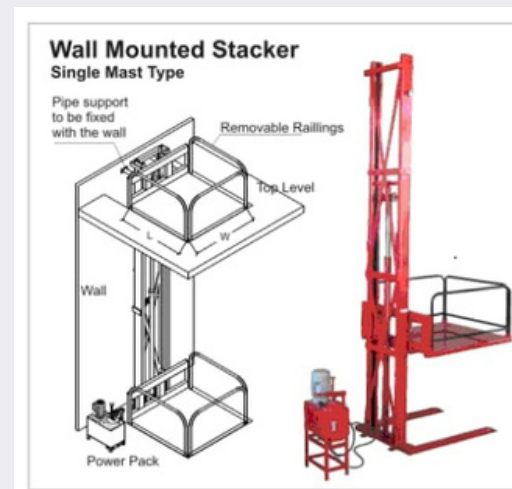

We also repair and supply parts for all make and models of industrial material handling equipment. Our Organization service technicians are authorized to perform mandatory Annual Inspections on your aerial

GOALS AND OBJECTIVES

Deliver Superior Elevator Solutions

BHAVYA TECH INTERNATIONAL aims to design, manufacture, and install state-of-the-art elevators that meet the diverse needs of our clients. We strive to provide cutting-edge technology, energy efficient systems, and advanced safety features to ensure optimal performance and user satisfaction

Ensure Customer Satisfaction

BHAVYA TECH INTERNATIONAL is committed to exceeding customer expectations by delivering superior service throughout the entire elevator lifecycle

Promote Safety and Accessibility.

Safety is paramount in the elevator industry, and BTI is dedicated to designing and implementing elevators that adhere to the highest safety standards.

CONCEPT IN BUSINESS

BTI seeks to be a leader in the elevator industry, providing exceptional solutions, outstanding customer service, and contributing to a safer, more accessible, and sustainable built environment.

HYDRAULIC LIFTS

Hydraulic lifts are a type of elevator that operate using hydraulic fluid, typically oil, to generate power and lift the elevator car

BENEFITS OF HYDRAULIC LIFTS

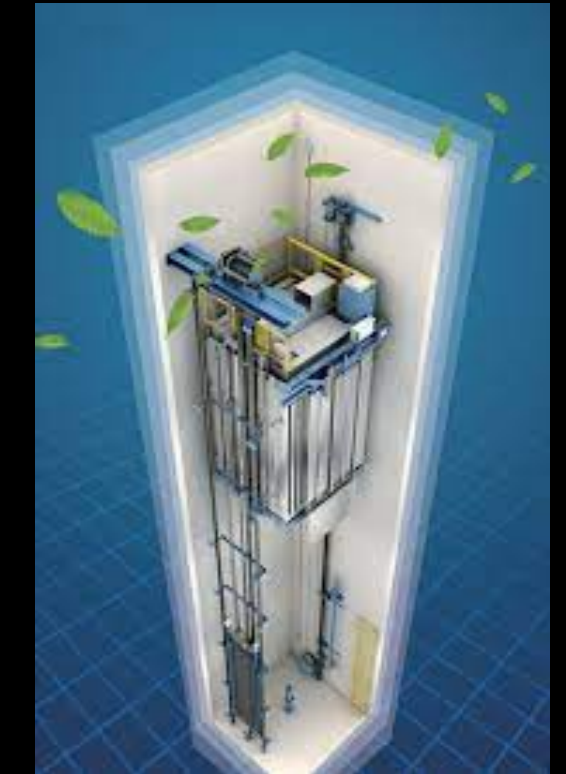

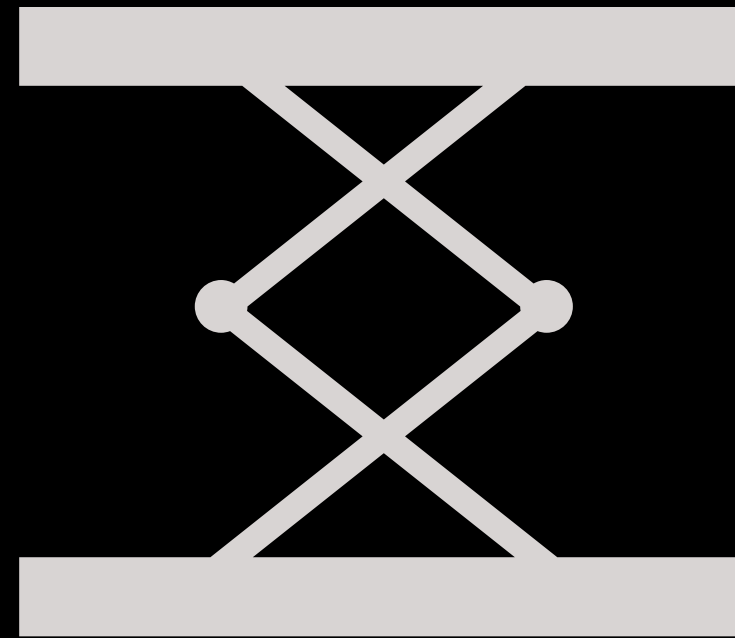

Versatility: Hydraulic lifts can be installed in a wide range of buildings, including low to mid-rise residential, commercial, and industrial structures. They are suitable for both indoor and outdoor installations.

Safety Features: Hydraulic lifts incorporate various safety features to ensure the well-being of passengers. These features may include emergency stop buttons, door sensors, and emergency lowering mechanisms

Reliability: Hydraulic lifts are known for their reliability and durability, requiring minimal maintenance when properly installed and serviced.

Load Capacity: Hydraulic lifts are capable of handling heavy loads, making them suitable for freight and service elevators in addition to passenger elevators.

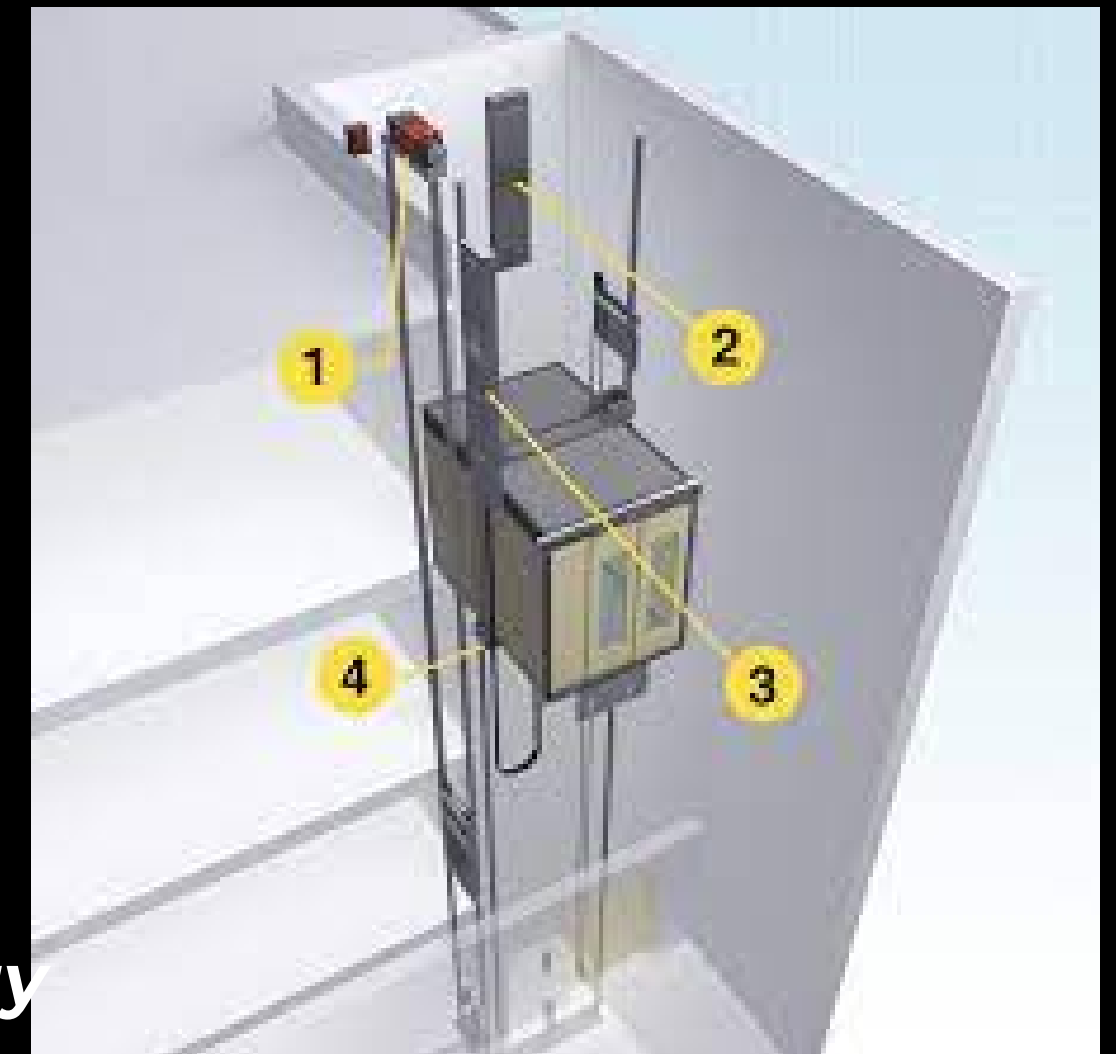

MRL LIFT

MRL stands for Machine Room-Less, referring to a type of elevator that does not require a separate machine room for housing the elevator machinery

It's important to consider specific requirements, building codes, and regulations when choosing the appropriate elevator type for a particular project.

MRL lifts are popular choice due to their space efficiency, energy savings, and design flexibility.

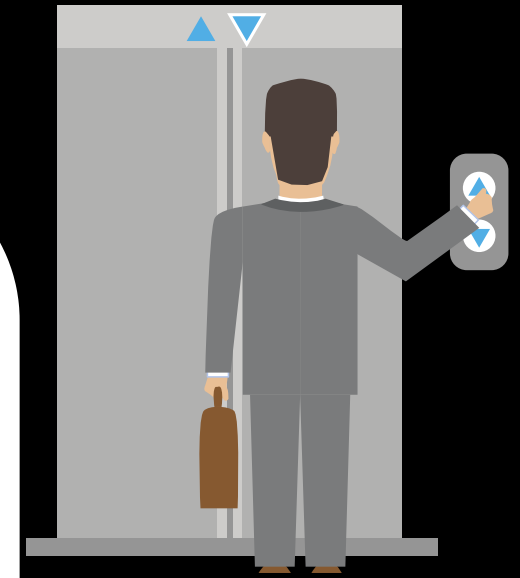

BENEFITS OF MRL LIFTS

Space Efficiency: MRL lifts are designed to maximize space utilization within a building. By eliminating the need for a separate machine room, more usable space is available for other purposes.

Design Flexibility: MRL lifts offer design flexibility, allowing architects and designers to have more freedom in incorporating elevators into the building layout. The absence of a machine room enables greater flexibility in elevator placement and configuration.

Reduced Construction Costs: MRL lifts can contribute to cost savings during construction, as the elimination of a machine room simplifies the installation process and reduces construction time and materials required.

Safety Features: MRL lifts incorporate various safety features, including emergency stop buttons, door sensors, and backup power systems, ensuring passenger safety in case of emergencies or power outages.

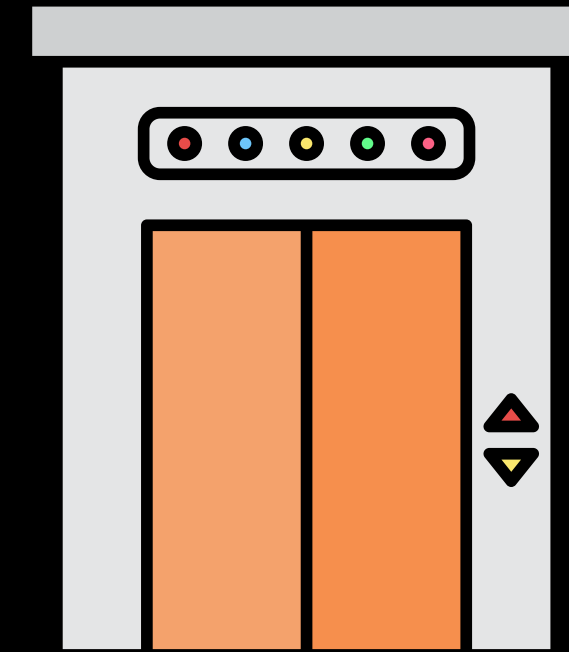

WHEEL CHAIR LIFT

Wheelchairs can be too bulky to fit into small areas and difficult to get over any incline. Wheelchair lifts help solve this problem. Wheelchair lift devices provide a surface for the rider that lifts into a vehicle so they can go where they need to.

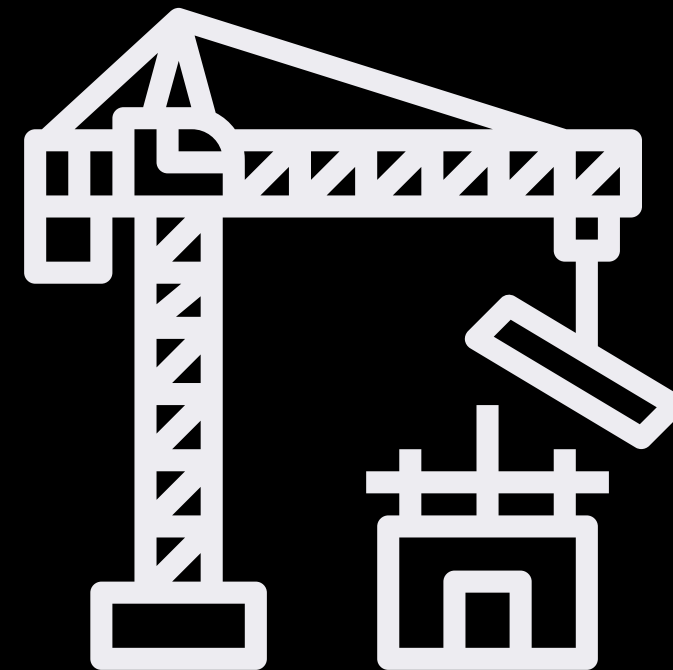

STEEL STRUCTURE

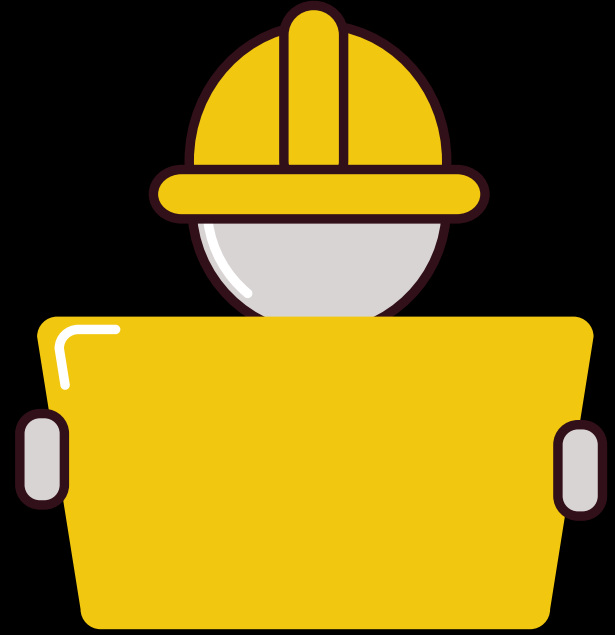

A steel structure is a common choice for elevator construction due to its strength, durability, and ability to support heavy loads. Elevator systems consist of several components, and the steel structure plays a crucial role in providing the framework and support for the elevator shaft and its associated components

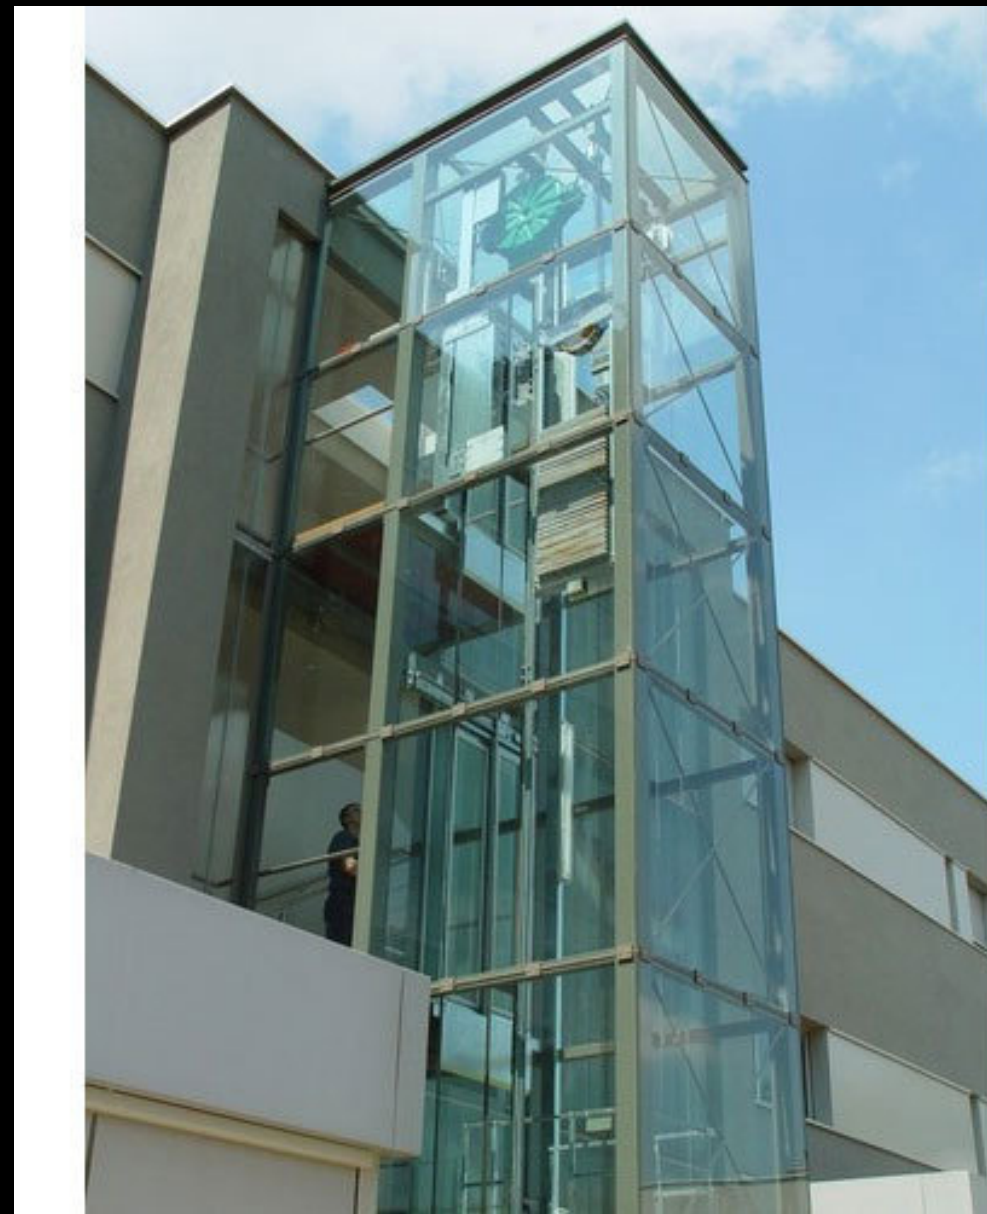

CIVIL STRUCTURE

The civil structure for an elevator primarily refers to the construction of the elevator shaft and the related components within the building. It involves the planning, design, and construction of the space where the elevator will be installed

DESIGNS
